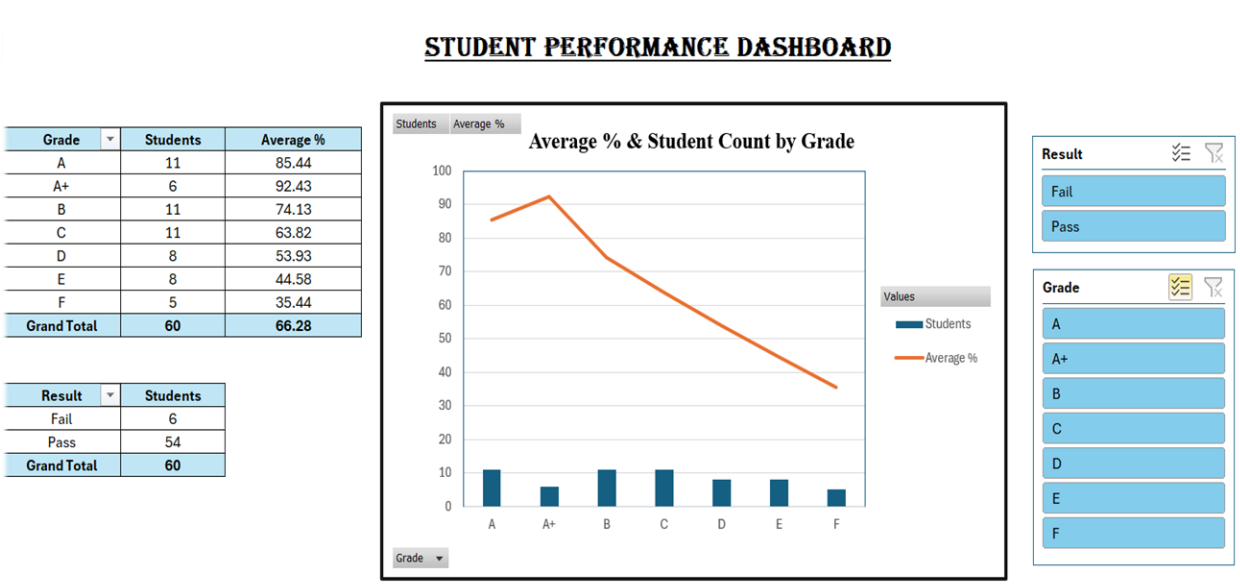
Student Performance Dashboard

🧩 Project Description

This project presents an interactive Excel dashboard to analyze student performance based on grades, average percentage, and pass/fail results. The dashboard helps quickly understand overall academic performance and compare results across different grade categories using pivot tables, charts, and slicers.

Dashboard Preview



Grade	Students	Average %
A	11	85.44
A+	6	92.43
B	11	74.13
C	11	63.82
D	8	53.93
E	8	44.58
F	5	35.44
Grand Total	**60**	**66.28**

Result	Students
Fail	6
Pass	54
Grand Total	**60**

Figure 01: Student Performance Dashboard (Excel)

🎯 Objective

To build a simple and interactive dashboard in Microsoft Excel that:

- Summarizes student performance by grade
- Shows average percentage per grade
- Displays pass vs fail distribution
- Allows filtering using slicers for better analysis

📂 Dataset Used

The dataset contains:

- Student Name
- Grade (A, A+, B, C, D, E, F)
- Percentage
- Result (Pass / Fail)

(Data was structured in tabular format and converted into Pivot Tables for analysis.)

🛠️ Tools & Features Used

- Microsoft Excel
- Pivot Tables
- Pivot Charts (Combo Chart: Bar + Line)
- Slicers (Grade & Result)
- Basic formatting & dashboard layout
- Data aggregation (Count of Students, Average Percentage)

📊 Key Insights

- **Highest average percentage observed in A+ grade**
- **Majority of students are in Pass category**
- **Performance decreases progressively from A+ to F**
- **The dashboard allows quick filtering of grades and pass/fail results using slicers**

🧠 What I Learned

- How to create multiple pivot tables on a single sheet
- How to build an interactive Excel dashboard
- How to connect slicers to multiple pivot tables
- How to use combo charts for better comparison
- Dashboard layout design for better visual presentation

📌 How to Use the Dashboard

- Use the **Grade slicer** to filter performance by grade
- Use the **Result slicer** to view Pass or Fail students
- The chart updates automatically based on slicer selection
- Tables update dynamically with filters

Dashboard Interaction Example

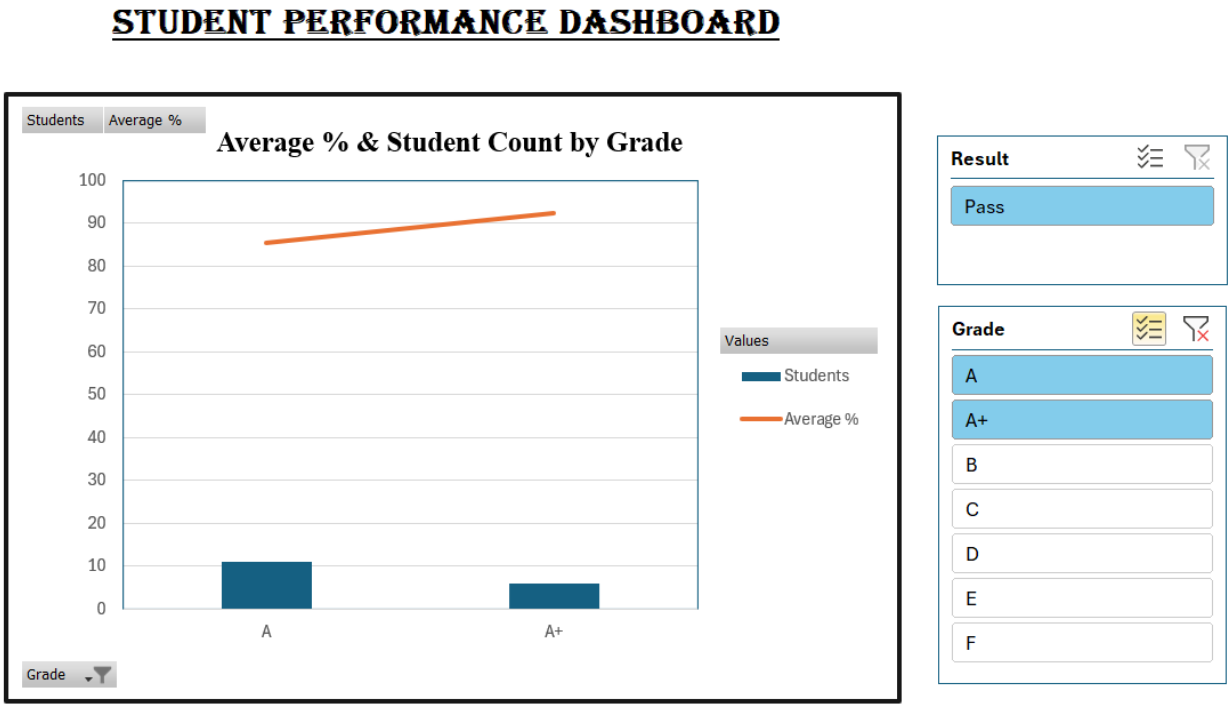


Figure 02. Slicer Filter Applied

Conclusion

This project demonstrates my ability to clean data, analyze it using pivot tables, and present insights through a simple and interactive Excel dashboard. It reflects practical Excel skills useful for data analysis and reporting tasks.
