PROJECT TITLE: Personal Expense Dashboard – January 2026

PROJECT TYPE: Excel Data Analysis & Interactive Dashboard

📌 Project Overview

This project is an interactive personal expense tracking and analysis dashboard built in Microsoft Excel. It helps monitor daily spending, identify expense patterns, and compare weekday vs weekend expenses using visual analytics.

The dashboard transforms raw transaction data into meaningful insights through Pivot Tables, charts, and slicers for dynamic filtering.

🎯 Objective

- Track monthly personal expenses in different categories
- Analyze spending behavior across weekdays and weekends
- Compare payment modes (Cash vs UPI)
- Build an interactive dashboard for quick decision-making
- Practice real-world Excel data analysis and visualization

📊 Dataset Description

The dataset contains daily transaction records for January 2026 in the following fields:

- Date
- Category (Food, Travel, Rent, Shopping, etc.)
- Amount
- Payment Mode (Cash / UPI)
- Day Type (Weekday / Weekend)

🛠 Tools & Excel Features Used

- Pivot Tables
- Pivot Charts (Column Chart)
- Slicers (Category, Payment Mode, Day Type)

- Data Cleaning & Structuring
- Cell Formatting & Dashboard Design
- Sorting & Filtering
- Basic Excel formulas (derived fields like Day Type)

⚙ Steps Performed

1. Structured raw expense data in tabular format
2. Added classification for weekday vs weekend
3. Created Pivot Table to summarize expenses by category
4. Compared spending based on day type
5. Built Pivot Chart for visual comparison
6. Added slicers for interactive filtering
7. Designed a clean dashboard layout with formatting and borders

---

📈 Key Insights

- Rent is the highest monthly expense
- Food expenses occur consistently across the month
- Weekend spending is higher in shopping and online food
- Travel expenses occur mostly on weekdays

Expense Summary

Payment Mode (All)

Sum of Amount	Column Labels		
Row Labels	Weekday	Weekend	Grand Total
Food	2100	800	2900
Laundry		200	200
Mobile Recharge	399		399
Online Food		350	350
Rent	6500		6500
Shopping		1450	1450
Snacks		150	150
Stationery	200	150	350
Travel	880		880
Grand Total	**10079**	**3100**	**13179**

🎓 Learning Outcome

Through this project, I learned:

- Real-world data organization in Excel
- Creating and customizing Pivot Tables
- Building interactive dashboards
- Using slicers for dynamic filtering
- Presenting data visually for better decision making

💡 Conclusion

This project demonstrates how Excel can be used as a powerful tool for financial tracking and data visualization. The dashboard provides quick insights into spending patterns and supports better budget decisions.
