Sales Performance Dashboard

✳ Project Description

This project presents an interactive Sales Performance Dashboard developed using Microsoft Excel to analyze business sales data across different dimensions such as time, region, product category, and salesperson performance.

The dashboard enables quick understanding of overall sales performance, profitability, and sales trends. It uses pivot tables, pivot charts, and slicers to provide dynamic filtering and real-time insights for better decision-making.

📊 Dashboard Preview

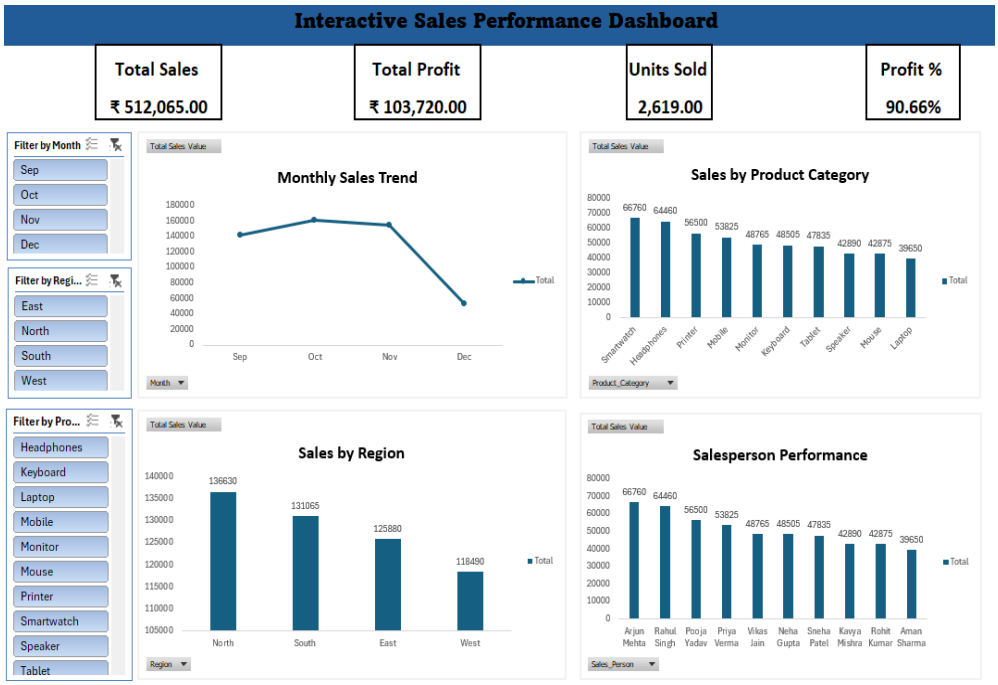

Fig.1. Sales Performance Dashboard

🎯 Objective

To build an interactive and visually clear dashboard in Microsoft Excel that:

- Summarizes total sales performance
- Tracks monthly sales trends
- Compares sales across regions

- Analyzes product category performance
- Evaluates salesperson performance
- Displays profitability indicators
- Allow dynamic filtering using slicers

🧰 Tools & Techniques Used

- Microsoft Excel
- Pivot Tables
- Pivot Charts
- Slicers
- KPI indicators
- Data formatting & visualization

📁 Dataset Description

The dataset contains transaction-level sales information including:

- Order ID
- Date and Month
- Region
- Salesperson
- Product Category
- Price per Unit
- Units Sold
- Total Sales
- Profit
- Profit Percentage

📈 Key Dashboard Components

1. KPI Indicators

Displays key business metrics:

- Total Sales
- Total Profit
- Units Sold
- Profit Percentage

Total Sales	Total Profit	Units Sold	Profit %
₹ 512,065.00	₹ 103,720.00	2,619.00	90.66%

Fig.2. KPI Summary Section

---

2. Monthly Sales Trend

Shows sales variation across months to identify trends and performance patterns.

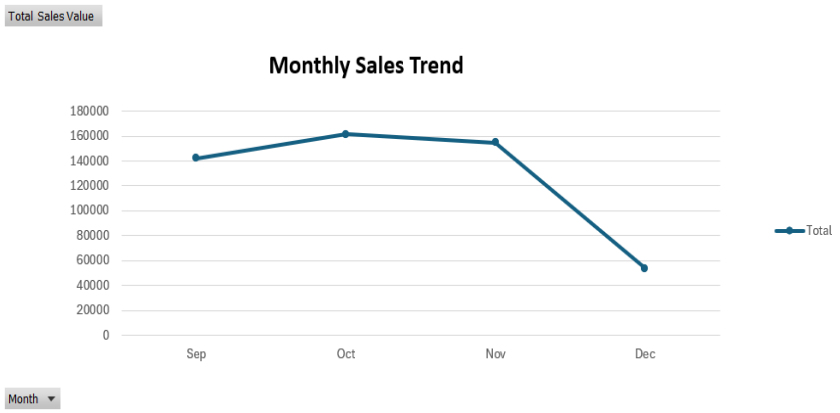

Fig.3. Monthly Sales Dashboard

---

3. Sales by Product Category

Compares performance of different product categories.

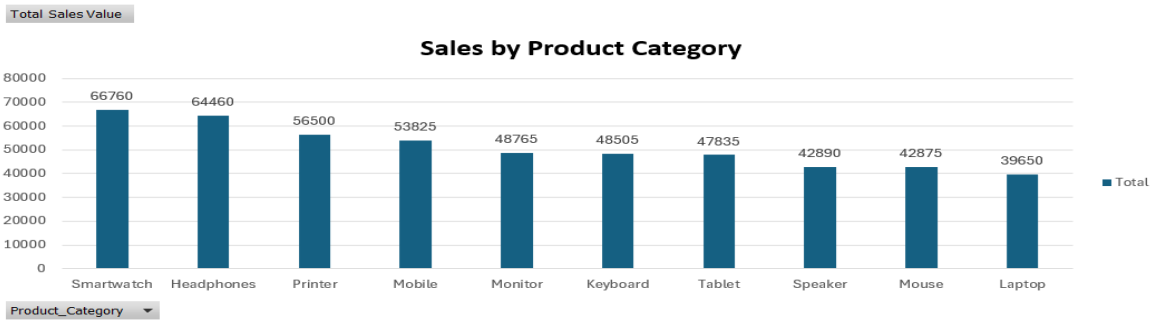

Fig.4. Product Category Dashboard

---

4. Sales by Region

Displays regional sales comparison to identify top-performing areas.

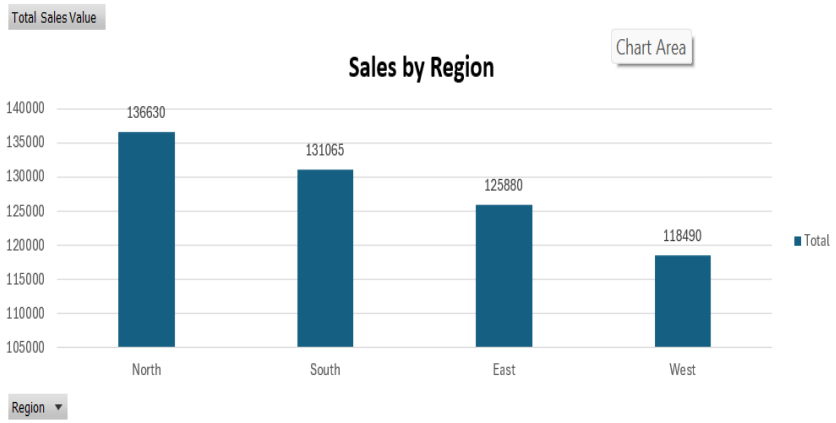

Fig.5. Regional Sales Dashboard

---

5. Salesperson Performance

Evaluates individual sales contribution.

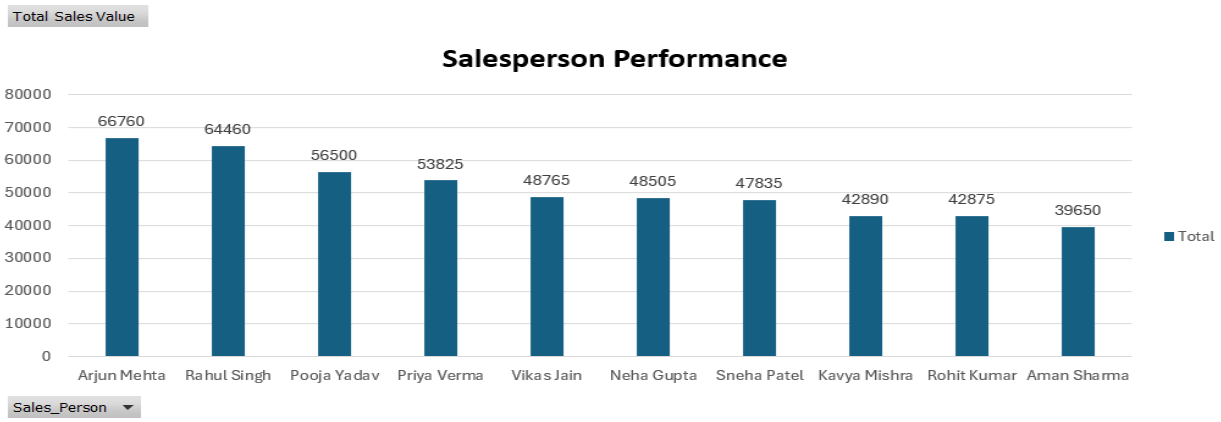

Fig.6. Salesperson Performance Dashboard

---

6. Interactive Filters

Allows filtering by:

- Month
- Region
- Product Category

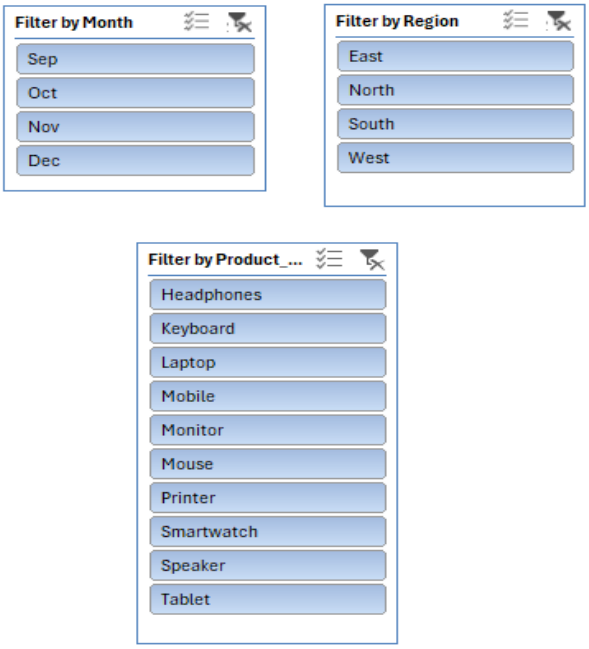

Fig.7. Interactive Slicers

⚙ Methodology

1. Collected and structured raw sales data.
2. Created pivot tables for data summarization.
3. Built pivot charts for visual representation.
4. Added slicers for interactive filtering.
5. Designed KPI indicators linked to pivot data.
6. Organized dashboard layout for clarity and usability.

📊 Insights Generated

- Identification of top-performing products
- Regional performance comparison
- Monthly sales trend analysis
- Profitability tracking
- Salesperson performance evaluation

✅ Conclusion

The Sales Performance Dashboard effectively transforms raw data into meaningful insights using Excel visualization tools. The interactive design improves data analysis efficiency and supports informed business decision-making.

💡 Skills Demonstrated

- Data Analysis
- Excel Dashboard Development
- Data Visualization
- Business Intelligence Reporting
- Interactive Data Filtering
